

Weekly Operations Report

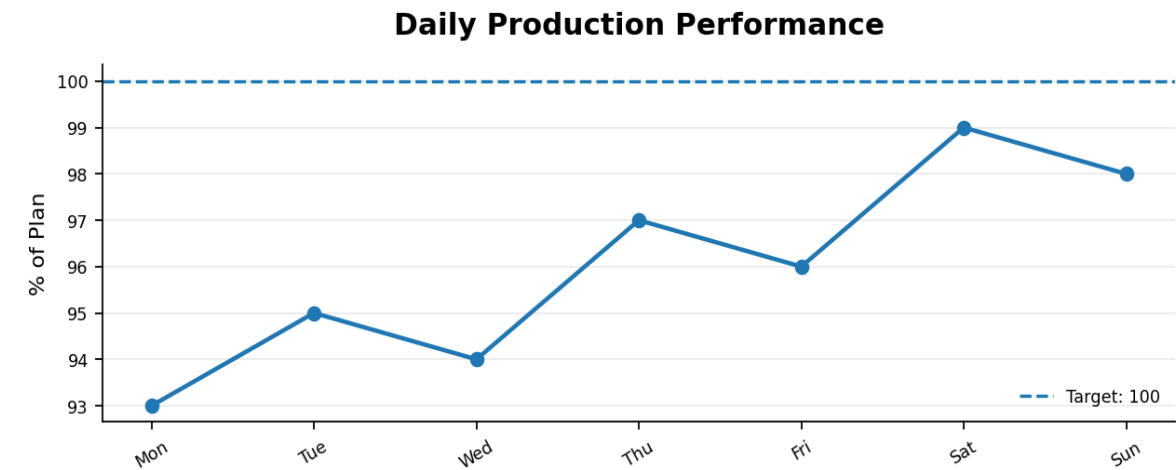

Mine: OT Surface Operations | Reporting period: Week ending 2026-07-19 | Generated: 2026-07-19 14:00

Weekly Executive Summary

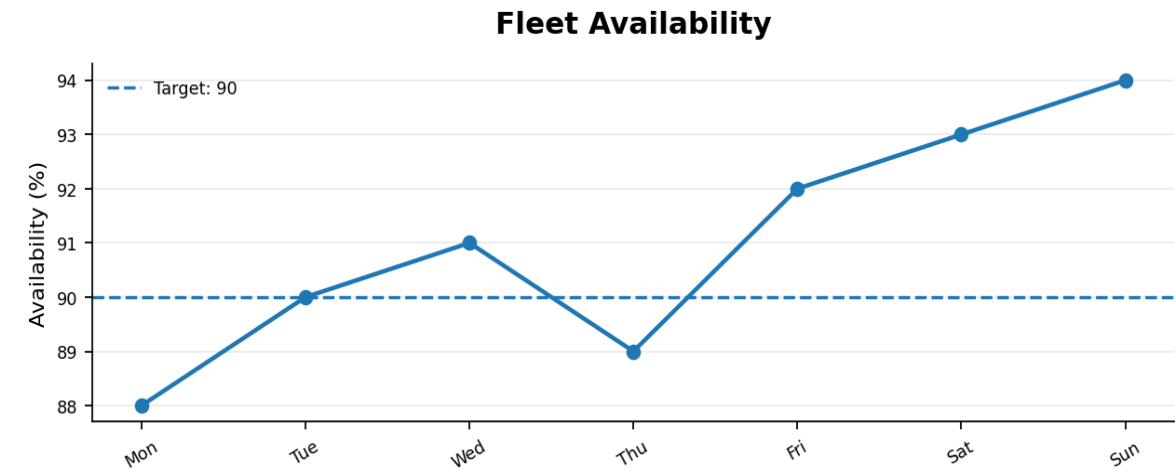

This weekly report summarizes operational trends, department performance, risk movement, and priority recommendations for mine leadership review.

87	96%	91%	104%
Mine Health	Production	Fleet	Plant

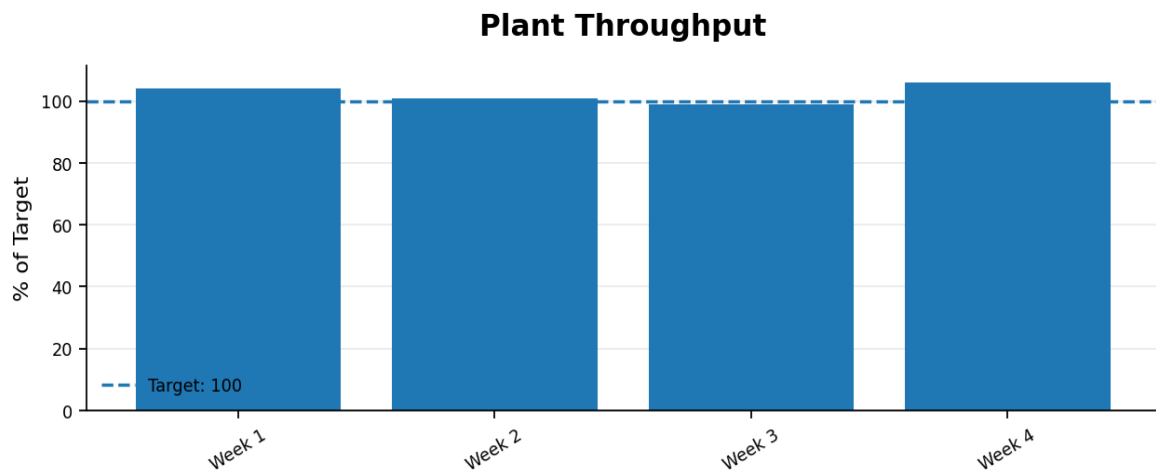

Production Performance Trend

Fleet Availability Trend

Plant Throughput Performance

Weekly KPI Performance

KPI	Weekly Status	Performance	Management Comment
Production	Stable	96% of plan	Production performance remained close to the weekly plan.
Fleet	Watch	91% availability	Fleet utilization showed pressure during the week.
Plant	Stable	104% throughput	Plant throughput remained within the expected operating range.
Safety	Watch	0 recordable events	Safety risk exposure requires continued leadership focus.
Maintenance	Watch	Backlog elevated	Maintenance delays affected equipment availability.

Weekly Recommendations

- Review fleet bottlenecks and improve equipment allocation for the next week.
- Confirm weekly production recovery actions with operations and planning teams.
- Escalate recurring maintenance delays affecting truck and shovel availability.
- Review safety controls for active operational risk areas.

Leadership Focus

The primary focus for the next reporting period should be fleet utilization, maintenance backlog reduction, and production recovery actions. Plant performance remains positive and provides an opportunity to recover mining shortfalls.
